

RONDCOM MEASURING

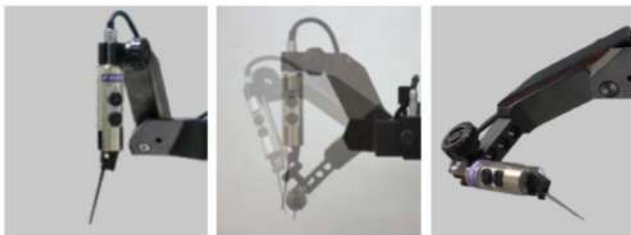

RONDCOM NEX 100 (DX/SD) SERIES

Standard model of roundness and cylindrical profile measuring instruments Standard model boasting class-leading high accuracy

Rotation accuracy ($0.02 + 3.2 H/10000$) μm

Equipped with full new function and meets a need of machined parts high accuracy measurement. It is a top class high accuracy roundness cylindrical profile measuring instrument.

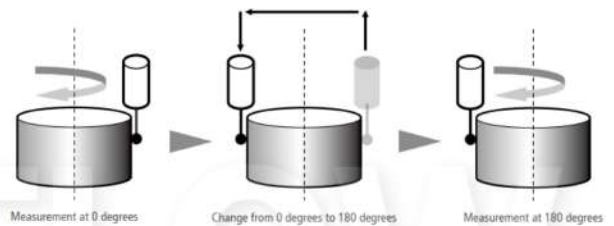

RONDCOM NEX 100/200 manual detector holder Patented

If the offset detector holder is flipped, the detector automatically changes its alignment by 90 degrees.

Measurable diameter

With standard holder: max. ϕ 30 mm. With holder for measuring the opposite diameter (optional): max. ϕ 100 mm

Automatic setting of the measuring range

Measurement of roundness and roughness*2

Automatic change between roundness and diameter measurement

The movement range can be adjusted via the software in such a way that allows measurements to be conducted via holes or grooves, for example. With the AFD, the adjustment that is normally made manually is made via the automatic function of the software.
