

CONTOUR MEASURING

SURFCOM NEX 030(DX/SD) SERIES

The SURFCOM NEX 030 is suitable for measuring all contour geometries and standard workpieces in manual or CNC controlled measurement procedures.

Measuring a wide variety of workpieces under varying temperature environments in a short period of time
"Contour profile measuring instrument achieving high accuracy"

Measurement of surface finish and contour – sensors can be combined as required

With the new, versatile hybrid detectors, SURFCOM NEX covers a measuring range twice as large as conventional instruments. This measuring instrument is suitable for measuring the surface quality and contour of inclined, corrugated, and curved surfaces in a single procedure. The special stylus can be swapped in and out at any stage depending on the workpiece.

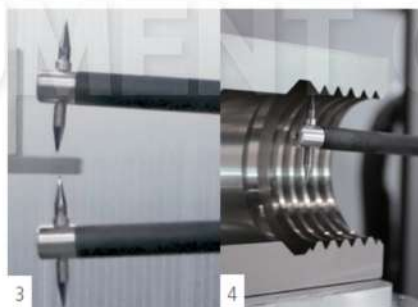

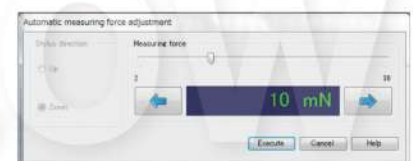

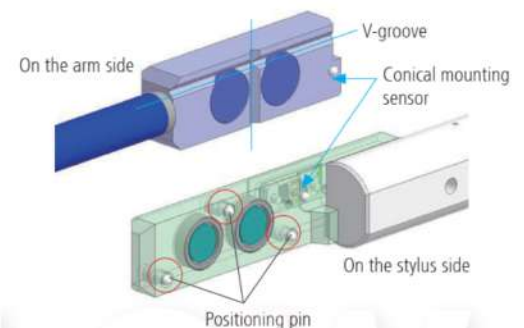

Quick and easy replacement of the stylus arm

Patented

Double magnet and V-groove with 3 positioning points keep the arm stable. Precise change of stylus arm position

Mechanism for automatic measurement force adjustment

- Software-supported fine adjustment and control of the measurement force in increments of 2 mN
- Various combinations of arm and stylus can be used without weight adjustment
- Stylus is less likely to be scratched and damaged
