

SURFACE TEXTURE MEASURING

SURFCOM NEX 001 (DX/SD) SERIES

AI Function Simplifies Measurements

Measuring instrument designated for surface roughness. Achieved low vibration and high definition measurement by employing linear motor driver.

Pickup for roughness measurement NEX001 (E-DT-SS01A)

- The Specification of the pickup for roughness measurements is 1000 μm .

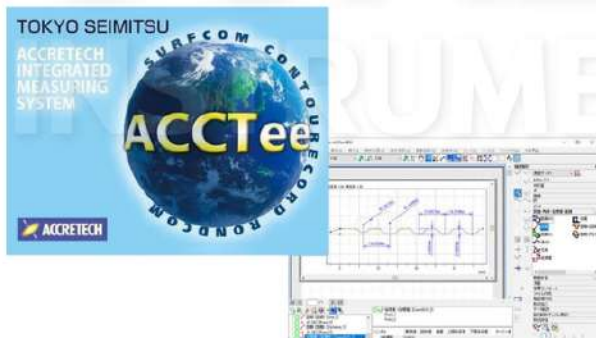

This is the pickup with compact design for high magnification and wide-range measurement.

The specification of pickup are; outer diameter : 14mm. measurement range : 1000 μm , maximum measurement magnification : 500,000 times.

Measurement with upward pickup posture (with auto-stop function) and horizontal trace measurement are available.

Preparation and measurement in a short time with the fastest drive in the class

Significantly improved drive speed reduces the time for approaching workpieces in manual mode, creating CNC programs and drive during CNC measurement. This improves efficiency throughout the inspection process, from preparation to measurement.
